

# Seyed Armin Vakil Ghahani

 Computer Science & Engineering Department, University Park, PA 16802

## EDUCATION

**Pennsylvania State University**, University Park, PA

Aug 2018 – Now

- Graduate Student in Computer Science & Engineering Department
  - Advisor: Prof. Mahmut Taylan Kandemir
  - GPA: 4/4
  - **Relevant Graduate Courses:** Fundamentals of Computer Architecture, Algorithm Design and Analysis, Binary-level Analysis, Language-based Security, Operating System Design, Emerging Technologies, Compiler Construction

**Sharif University Of Technology**, Tehran, Iran

Sep 2013 – Jul 2018

- Bachelor of Science (B.S.) in Computer Engineering - Hardware
  - Thesis: Cache Replacement Policy Based on Expected Hit Count  
Advisor: Prof. Pejman Lotfi-Kamran, Prof. Hamid Sarbazi-Azad
  - GPA: 16.48/20 (**CE Major Coursework: 18.1/20**)

## RESEARCH INTERESTS

- Virtual Memory
- Virtualized Systems
- Memory Systems
- Persistent Memory

## PUBLICATIONS

## RESEARCH EXPERIENCE

- **Pennsylvania State University**
  - ◇ **Virtual Memory** - Applications with large memory footprint experience high number of page walks during their execution, leading to high performance degradation, especially in virtualized systems. In this project, we characterize the page walk memory accesses to identify the main overhead of page walk and propose different optimizations throughout the memory hierarchy to reduce this overhead.
  - ◇ **DRAM** - DRAM needs refresh operations because DRAM cells lose their content/charge over time. The overhead of these refreshes increases with larger DRAM devices. My research in this area reduces the memory refresh overhead in virtualized systems by leveraging the same-content values in DRAM.
  - ◇ **Persistent Memory** - Memory persistency models constrain the order of reaching persistent writes to persistent memory (PM). To enforce this order in x86 processors, programmers should use expensive sfence instructions. In this project, we propose an extension to the x86 memory persistency model based on two existing paths to PM, enabling implicit persist ordering without using sfence instructions.
- **Sharif University of Technology**
  - ◇ **Cache Replacement Policies** - My B.Sc. thesis project is on predicting the correlation of reuse-distance of each cache block and its remaining hit count. In my thesis, I proposed a cache replacement policy that leverages this correlation and reduces the miss rate of last-level caches.

<b>COMMUNITY SERVICE</b>	▪ <b>Sharif AI Challenge</b> (Contest Organizer)	Jan 2015 – Jan 2017
	• Undergraduate Programming Contest	
	▪ <b>1st Gateuino Contest</b> (Contest Organizer)	May 2016
	• Founded a hardware contest for undergraduate freshman and sophomore	
<b>PRESENTATIONS</b>	▪ DSM: A Case for Hardware-Assisted Merging of DRAM Rows with Same Content	
	• ACM SIGMETRICS	Jun 2020
<b>SKILLS</b>	▪ Programming Languages: C/C++, Python, CUDA/OpenMP, Verilog, R, Shell, Assembly, Dafny	
	▪ Simulators: gem5, BadgerTrap, DRAMsim2, BigHouse, Ramulator, CACTI, ChampSim	
	▪ Tools & Frameworks: Qemu, Pin, DynamoRIO, LLVM, ANTLR, Google Protobuf, gRPC, Qt	
	▪ Operating Systems: Ubuntu(Native), Windows	
	▪ Type Setting: $\LaTeX$ , Microsoft Office	
<b>LANGUAGES</b>	▪ Persian: Native	
	▪ English: Fluent
